WORK SAFE

ASSE International

ASSE Certifications for a Stronger Workforce

Show your employer and clients that you have the knowledge and skills to safely work and help protect the occupants in health care facilities and other buildings where there could be exposure to potentially harmful pathogens.

This unique certification series educates and trains pipe trades craftspeople, and other construction and maintenance personnel, on how to more safely work in an environment with potential exposure to disease-causing pathogens. ASSE 12010 and 12020 certifications address the need for construction and maintenance personnel, and employers to become proficient in identifying and managing potential situations where they, or other building occupants, may be exposed to bloodborne, waterborne, and airborne pathogens. ASSE 12010 certification also covers the responsibility of personnel to understand and abide by the Environment of Care in the facility where they are working.

Throughout its 100-year history, the goal of ASSE International has been to safeguard public health and safety through the use of proper plumbing, piping and mechanical practices.

ASSE 12010 and 12020 trained and certified personnel have the knowledge and skills to protect the health and safety of themselves, building occupants, building employees and various healthcare facilities' clinical-related operations from pathogens and other hazards that may be present in their workplaces — all while respecting the Environment of Care that is so crucial to positive experiences in healthcare.

About the program:

- Nationally recognized third-party certification body
- Maintains all certification records
- Qualifications and approval of instructors/proctors overseen by ASSE
- Quality and approval of training providers overseen by ASSE
- Certified individuals listed on ASSE's website
