Working Group Forming to Develop Rainwater Harvesting Professional Qualifications Standard

Mokena, Ill. (May 2, 2016) — ASSE International is forming a working group for the development of ASSE Series 21000, *Professional Qualifications Standard for Rainwater Catchment System Designers, Installers and Inspectors*. The first working group meeting will be held in early June via web conference.

This new professional qualifications standard will identify the minimum level of knowledge required to install, design, and inspect rainwater catchment systems, which collect rainwater to be used for a variety of plumbing and/or irrigation applications. Since there is no consensus standard that sets the minimum training requirements for rainwater catchment professionals, this standard will level qualifications and raise the bar for rainwater harvesting professionals who install, design, and inspect these important and evolving systems.

Industry stakeholders — including rainwater catchment system installers, designers, inspectors and manufacturers, plumbing professionals, building owners, building managers, engineers, AHJs, and the general public — are invited to participate. To apply for a position on this committee, you must submit a completed application (<http://goo.gl/07vJP>) and résumé to Professional Qualifications Coordinator Marianne Waickman by e-mail at marianne.waickman@asse-plumbing.org.

#

ASSE International is an ANSI-accredited standards developer and product certification body comprised of members representing all disciplines of the plumbing and mechanical industries.

ASSE's product performance standards, professional qualifications standards, professional certification and product listing programs aim to improve the performance and safety of plumbing and mechanical systems. Learn more about ASSE International at <http://www.asse-plumbing.org>.
