

# ASSE 12010 Benefits to End Users

## Environment of Care, Infection Control and Construction Risk Assessment Certification Program

*Together, we can share our skill sets to protect occupant safety and prevent outbreaks in your buildings*

The goal of the ASSE 12010 personnel certifications is to **provide end-users with technicians who can work as valuable members of construction risk assessment teams**. Certified team members can assist in the protection of building occupants from pathogens and other potential construction hazards.

### WHAT IS THE ASSE 12010 PROFESSIONAL QUALIFICATIONS STANDARD?

The ASSE 12010 is a Professional Qualifications Standard for technicians involved with Environment of Care, Infection Control and Construction Risk Assessment, developed by the industry through an open consensus, ANSI process.

### WHAT MAKES ASSE 12010 CERTIFIED INDIVIDUALS MORE QUALIFIED THAN OTHER PROFESSIONALS?

- Extra certification and experience is required — to become certified, individuals must take additional training and pass a third-party administered certification exam
  - End-users can feel confident knowing certified professionals have the working knowledge to perform the required tasks in order to complete the project in a safe and productive environment.
- Must recertify every three years, which includes continued education classes and a recertification exam

### HOW CAN ASSE 12010 CERTIFIED TECHNICIANS HELP YOU AND YOUR FACILITY?

ASSE 12010 Certified technicians have an understanding of:

- Environment of care
  - Owner expectations
  - Patient or occupant expectations
- Infection control
  - Isolation and negative air methods
  - Housekeeping and dust control
- Other construction risk assessments
  - Preconstruction
  - Hazard
  - Fire and life safety
  - Interim life safety measures
