ASSE ENVIRONMENT OF CARE, INFECTION CONTROL & CONSTRUCTION RISK ASSESSMENT CERTIFICATION

Throughout its 100-year history, the goal of ASSE International has been to safeguard public health and safety through the use of proper plumbing, piping and mechanical practices.

ASSE 12010 and 12020 trained and certified personnel have the knowledge and skills to protect the health and safety of themselves, building occupants, building employees and various healthcare facilities' clinical-related operations from pathogens and other hazards that may be present in their workplaces — all while respecting the Environment of Care that is so crucial to positive experiences in healthcare. ASSE 12010 certification also covers the responsibility of personnel to understand and abide by the Environment of Care in the facility where they are working.
