ASSE Certifications for a **Stronger Workforce**

Expand your professional capabilities while protecting our nation's potable water supply with ASSE Cross-Connection Control Certification.

ASSE certification in the specialized skills of backflow prevention assembly testing, repairing, and surveying adds nationally recognized credentials to your resume, enhances your skills, and increases the number of tasks you can perform – ultimately raising your employability.

There are more than 20,000 ASSE Certified backflow professionals spanning all 50 states in the U.S. and parts of Canada. With more than 100 ASSE approved schools in the U.S., you can be assured that you'll receive the best training so you can use your skills in the field as soon as you become certified.

Take the first steps in becoming ASSE Certified by finding an ASSE Approved school near you at www.asse-plumbing.org/schools.

ASSE Cross-Connection Control Certification meets the challenge of a sound and legally defensible credentialing program based on voluntary, industry consensus standards.

If your jurisdiction accepts or requires ASSE Cross-Connection Control Certification, it's for a good reason — training, testing, and certification is based on the ASSE/IAPMO/ANSI Series 5000 standard, which provides stringent professional qualifications for the backflow prevention industry. Simply put: only those who are qualified to work on backflow prevention assemblies are allowed to perform cross-connection control tasks.

Jurisdictions and employers feel confident knowing that ASSE certified professionals have completed a qualified course of instruction, passed a written exam, and passed a practical exam, which covered the knowledge and skills needed to protect potable water supplies from backflow or cross-contamination.

About the certifications:

- Documented practical experience required to qualify for certification.
- Required comprehensive 40-hour training course covering industry-decided knowledge and skills.
- Required comprehensive written exam, and closed book practical exam demonstrating proper field test procedures (*Backflow Prevention Assembly Tester Certification*).
- Certification is valid for three years.
- A refresher course, written exam, and practical exam are required for recertification.

About the program:

- Nationally recognized third-party certification, independent of all training course providers and instructors.
- Maintains all certification records, and notifies schools and individuals when it's time to re-certify.
- Qualifications and approval of instructors/proctors overseen by ASSE.
- Quality and approval of training providers overseen by ASSE.
- Certified individuals and approved training providers listed on ASSE website.
